

## TENS Unit Device

### Please read before signing

It is our priority to make sure we provide you with the best care. As part of your treatment, we use TENS (Transcutaneous Electrical Nerve Stimulation) unit device for pain management. If you are in pain it is very likely that you will use this unit while being treated in our office. This device stimulates the nerves for therapeutic purposes. TENS is a non-invasive, low-risk nerve stimulation intended to reduce pain, both acute and chronic. This device is attached to a re-usable electrode patches. These patches are applied to your skin. For health and sanitary purposes, I advise each patient to purchase electrodes for the duration of your treatment. The patches will be kept in a box labeled with your name. Each pack of electrode cost \$5.00 and is re-usable. However, these patches will eventually have to be replaced once it does not adhere to the skin.

Please indicate if you wish to purchase electrodes.
